

Water Fire Extinguishers

Why water? Ideal for extinguishing Class A fires involving solid combustibles, water extinguishers are popular in virtually every environment. Water has well established characteristics and a proven track record in removing the heat from fire. With a spray-type nozzle, the 6ltr model is di-electrically tested and therefore suitable for use on live electrical equipment up to 1,000 V from a distance of 1m.

Where should water be used? Best suited to hotels, shops, offices, and places where water is needed to penetrate into soft furnishings and fabrics. Water extinguishers are also ideal for tackling fires involving solids such as wood, paper and textiles, making them a great choice for the small business owner. Suitable for applications indoors above 5°C, they will become inoperable if allowed to freeze.
